

Team Research

Keep in Mind!!!

- Deadline for:
 - Conference
 - Proposal
 - Defend
- Requirements:
 - Graduation

Timeline

- Year 1:
 - Literature review → Data collection → Baseline model → Experiments → Submit Paper #1 → Proposal
- Year 2
 - Improve method → Extended experiments → Thesis writing → Defense / Journal extension

Research Topics

- Efficient Temporal-Semantic Integration in Vision-Language Models for Complex Video Event Understanding
- Human Emotion and Affective State Recognition from Image and Video.
- Egocentric Visual Perception for Fine-Grained Temporal Scene Understanding in Video.

Integrated Framework

Ongoing

- SignState-Align: Efficient Articulator-Aware State-Space Modeling for Gloss-Free Continuous Sign Language Translation
 - Chayanin (Tonkow)
 - Target: CVPR 2027

Project

- Visual Language Model Development for Anomaly Detection
- AI Coach (Lenovo Research)
- Emotion Sync ???

Resources

Top Conferences

Area	Conference	Rank (CORE / CCF)	Abstract Deadline	Full Paper Deadline	Conference Month
Computer Vision (CV)	CVPR (IEEE/CVF Conference on Computer Vision and Pattern Recognition)	A* / CCF A	~Early November	~Mid-November (e.g., CVPR 2027 closes Nov 2026)	June
	ECCV (European Conference on Computer Vision)	A* / CCF B	~Late February	~Early March (Held in even years, alternating with ICCV)	September - October
	ICCV (IEEE/CVF International Conference on Computer Vision)	A* / CCF A	~Early March	~Mid-March (Held in odd years, alternating with ECCV)	October
	WACV (IEEE Winter Conference on Applications of Computer Vision)	Core A	~Mid-June	~Mid-July (Typically features a two-round submission system)	January
Multimedia (MM)	ACM MM (ACM International Conference on Multimedia)	A* / CCF A	~Late March	~Early April	November
	ICME (IEEE International Conference on Multimedia and Expo)	Core A / CCF B	~Mid-December	~Mid-December	July
	MMM (International Conference on Multimedia Modeling)	Core B	-	~August - September	January
Artificial Intelligence & Machine Learning (AI/ML)	NeurIPS (Conference on Neural Information Processing Systems)	A* / CCF A	~Early May	~Early May	December
	ICML (International Conference on Machine Learning)	A* / CCF A	~Late January	~Late January	July
	AAAI (AAAI Conference on Artificial Intelligence)	A* / CCF A	~Mid-July	~Late July	February
	IJCAI (International Joint Conference on Artificial Intelligence)	A* / CCF A	~January	~January	August

CVPR 2026

CVPR 2026 Call for Papers

Papers in the main technical program must describe high-quality, original research. Topics of interest cover all aspects of computer vision and pattern recognition including, but not limited to:

- | | |
|---|--|
| <ul style="list-style-type: none">• 3D from multi-view and sensors• 3D from single images• Adversarial attack and defense• Autonomous driving• Biometrics• Computational imaging• Computer vision for social good• Computer vision theory• Datasets and evaluation• Deep learning architectures and techniques• Document analysis and understanding• Efficient and scalable vision• Embodied vision: Active agents, simulation• Event-based cameras• Explainable computer vision• Humans: Face, body, pose, gesture, movement• Image and video synthesis and generation• Low-level vision• Machine learning (other than deep learning)• Medical and biological vision, cell microscopy | <ul style="list-style-type: none">• Multimodal learning• Optimization methods (other than deep learning)• Photogrammetry and remote sensing• Physics-based vision and shape-from-X• Recognition: Categorization, detection, retrieval• Representation learning• Computer Vision for Robotics• Scene analysis and understanding• Segmentation, grouping and shape analysis• Self-, semi-, meta- and unsupervised learning• Transfer/ low-shot/ continual/ long-tail learning• Transparency, fairness, accountability, privacy and ethics in vision• Video: Action and event understanding• Video: Low-level analysis, motion, and tracking• Vision + graphics• Vision, language, and reasoning• Vision applications and systems |
|---|--|

Important Dates

Abstract Submission Deadline*:	Nov 07, 2025 AOE
Paper Submission Deadline*:	Nov 13, 2025 AOE
Supplementary Materials Deadline:	Nov 20, 2025 AOE
Reviews Released:	January 22, 2026
Rebuttal Period:	January 22-29, 2026
Final Decisions:	February 20, 2026

Idea

CVPR2025

Reconstructing Humans with a Biomechanically Accurate Skeleton

Yan Xia^{1,2} Xiaowei Zhou² Etienne Vouga¹ Qixing Huang¹ Georgios Pavlakos¹

¹The University of Texas at Austin ²Zhejiang University

Figure 1. **Human Skeleton and Mesh Recovery (HSMR)**. We propose an approach that recovers the biomechanical skeleton and the surface mesh of a human from a single image. We adopt a recent biomechanical model, SKEL [24] and train a transformer to estimate the parameters of the model. We encourage the reader to see the skeleton and surface reconstructions in our [project page](#).

CVPR2026

All-Age Human Mesh Recovery

Laura Bravo-Sánchez^{1,2} Matthieu Armando¹ Romain Brégier¹ Grégory Rogez¹

Serena Yeung-Levy² Fabien Baradel¹

¹NAVER LABS Europe, ²Stanford University,

Figure 1. **Anny-Fit** recovers multi-person 3D human meshes of all ages directly in camera space. By integrating expert semantic, depth, keypoint, and segmentation cues, it improves all-age HMR and enables zero-shot adaptation of adult-only models.

SAM 3D Body: Robust Full-Body Human Mesh Recovery (cvpr2026)

Figure 2. SAM 3D Body Model Architecture. We employ a promptable encoder-decoder architecture with a shared image encoder and separate decoders for body and hand pose estimation.

- **SAM 3D Body (3DB)** is a promptable model for single-image full-body 3D human mesh recovery (HMR). Our method demonstrates state-of-the-art performance, with strong generalization and consistent accuracy in diverse in-the-wild conditions. 3DB estimates the human pose of the body, feet, and hands based on the [Momentum Human Rig \(MHR\)](#), a new parametric mesh representation that decouples skeletal structure and surface shape for improved accuracy and interpretability.
- 3DB employs an encoder-decoder architecture and supports auxiliary prompts, including 2D keypoints and masks, enabling user-guided inference similar to the SAM family of models. Our model is trained on high-quality annotations from a multi-stage annotation pipeline using differentiable optimization, multi-view geometry, dense keypoint detection, and a data engine to collect and annotated data covering both common and rare poses across a wide range of viewpoints.

CVPR 2026 Workshop

Human modeling & understanding: Face, body, pose, gesture, movement

The 3rd Workshop on Human Motion Generation - New Perspective on Simulation, Animation, and VR applications	HuMoGen
2nd Workshop on Photorealistic 3D Head Avatars	P3HA
10th Affective & Behavior Analysis in-the-wild	ABAW
Computer Vision for Biomechanics Workshop	CVBW
Workshop on Multimodal Human Motion Analysis	MOMA
2nd Workshop on Computer Vision for Children	CV4CHL
Humans of Generative AI	HuG
PhysHuman: Physically Grounded Human Perception and Modeling	PhysHuman
2nd Workshop on Human-Interactive Generation and Editing	HiGen
The 7th International Workshop on Eye and Gaze in Computer Vision	GAZE 2026

Video: Action and event understanding

Third Joint Egocentric Vision (EgoVis) Workshop	EgoVis@CVPR2026
Computer Vision with Small Data: Beyond Scale – Toward Data-Efficient Dynamically-Aware Video Intelligence	CV4SmallS
The 1st Workshop on Vision for Intelligent Task Assistants	VITA 2026
6th International Workshop on Long-form Video Understanding, Generation and Action	LOVEU
Second Workshop on Skilled Activity Understanding, Assessment & Feedback Generation	SAUAFG
